EDUCATION

Rochester Institute of Technology
Bachelor of Science in Computer Science
GPA: 3.5

Rochester, NY
Minors in Quantum Information Science, Computer Engineering
Expected May 2027

EXPERIENCE

Software Engineer Co-op

July 2026 – December 2026

Waygate Technologies, a Baker Hughes business

Skaneateles, NY

- Designed and implemented an automated camera capture quality testing framework to detect hitching, frame skips, and visual artifacts on a PCIe-connected camera overseeing MVIQ borescope live production feeds, referencing the Nyquist-Shannon theorem to target 120 FPS sampling and replacing repetitive manual validation workflows to reduce QA time by over 70%.
- Engineered an end-to-end training pipeline with NVIDIA TAO and PyTorch integrating automated checkpoint selection, evaluation, iterative pruning, and retraining, improving model accuracy on real-world and benchmark datasets by 15%.
- Architected a native C++ application using Direct3D 12, ONNX Runtime, and DirectML to eliminate bottlenecks caused by sequential preprocessing and inference in legacy code, improving real-time responsiveness and reducing latency overhead by 20%.
- Developed Bash scripts to automate repetitive model-training and environment setup workflows and configured OpenSSL certificate handling for the corporate network, eliminating recurring connectivity failures during development.

Quality Assurance Engineer Co-op

May 2025 – December 2025

Red Argyle

Canandaigua, NY

- Delivered high-quality, reliable Salesforce solutions for FAANG and Fortune 500 clients, including internal tooling, customer portals, dashboards, and workflow automations, projecting a 30% reduction in manual processing time while improving operational efficiency and client satisfaction.
- Devised Salesforce solutions using Lightning Web Components, Apex, and JavaScript, delivering internal tools and client-facing proof-of-concept demonstrations that increased stakeholder adoption by 40% and accelerated feature delivery by 12%.
- Executed comprehensive functional, regression, and integration testing across Salesforce Sales Cloud, Service Cloud, and Experience Cloud, crafting detailed test plans, test cases, and user guides to accelerate delivery and project a 30% reduction in overhead costs.
- Streamlined DevOps automation and version control processes using Git Actions and Salesforce DX, achieving a 25% reduction in deployment time and accelerating development efficiency.

Software Engineer Fellow

Jul 2024 – Sept 2024

Headstarter

New York, NY

- Spearheaded the development of over 5 AI applications and services, built with NextJS, OpenAI, Langchain, and StripeAPI, collectively handling 100+ user requests per week in production-like environments.
- Applied Retrieval Augmented Generation (RAG) methodology to ensure LLM outputs were both coherent and accurate, increasing overall model accuracy by 15%.
- Adopted Agile methodologies, CI/CD processes, and microservice architecture with guidance from senior engineers at Amazon, Bloomberg, and Capital One, coordinating the full project lifecycle using SCRUM and cutting sprint time by 40%.

PROJECTS

MEW: Marketplace for Efficient Webcommerce | *Java, Javascript, React, Spring Boot, SonarQube*

- Accelerated payment processing efficiency by leveraging Stripe API to establish a secure, PCI-compliant payment gateway, cutting transaction time from 2.0 seconds to 1.3 seconds, marking a 35% enhancement.
- Designed and optimized PostgreSQL schema and SQL queries with Spring Data JPA, increasing query performance by 40% via efficient SQL utilization and relational modeling.
- Enhanced API response and page render performance by mitigating p95 latency from 450 ms to 300 ms through advanced Spring Boot techniques such as dependency injection and efficient REST endpoints.
- Elevated code standards through static analysis with SonarQube, achieving a 95% coverage rate while uncovering and addressing over 70 code issues for optimal performance

RAICHU: Restaurant and Inventory Coordination Hub Utility | *JavaScript, React, TailwindCSS, NextJS, Firebase, Docker*

- Developed a full-stack web application to streamline inventory management and recipe tracking for restaurants, improving operational efficiency by 45%.
- Implemented real-time ingredient tracking, reducing inventory discrepancies by 30% and reducing instances of OOS by 20%.
- Built a structured, constraint-aware LLM API pipeline for dynamic recipe completion, incorporating prompt templating and output validation to improve low-inventory recommendation performance by 25%.

TECHNICAL SKILLS

Languages: Python, Java, C++, C#, Go, JavaScript, TypeScript, SQL

AI / Data / Cloud: Hugging Face, LangChain, LangGraph, Pandas, MongoDB, AWS Lambda, DynamoDB, Terraform

Tools / Systems: Linux, GitHub Actions, FastAPI, Node.js, Express.js, Postman, Jest, Mockito, DirectX, Distributed Systems
